Preparing the Blank:

- Mark the center on each end of the blank, drill small pilot holes.

DIAGRAM A / PARTS LAYOUT

DIAGRAM B / TURNING THE BLANKS

Turning the Blank

- Mount the handle blank between centers (see diagram B).
- Remove material to create a profile of your choice.
- Turn to the large dia to start while gradually moving to the smaller dia so the material will not weaken and break before it is complete.
- Turn the tenon to fit inside the tube of the brush. Use either a caliper or make a gauge to determine the diameter of the tenon.
- Sand and finish the handle.
- Use a skew or parting tool to separate the handle from the remaining blank.
- Place drops of glue inside the tube. insert the tenon.
- The brush is now ready to use.
